Gampaha Report.....	1
Gampaha District Revised.....	8

Definition for Home Garden¹

1. A piece of land which has a dwelling house and some form of cultivation can be considered as a home garden if the total area of the piece of land is **twenty or less than twenty** perches.
2. A piece of land which has a dwelling house and some form of cultivation, if total land areas is **more than twenty** perches can also be considered as a home garden if following two conditions are satisfied.
 - a. It is mainly meant for residential purposes.
 - b. A produce of cultivated land in the home garden is largely for home consumption.

Examples for Home Garden

- a) A land of extent 20 perches or less has a dwelling house and a few bearing coconut trees.
- b) A land of 20 perches or less, has a dwelling house and having extensive cultivation mainly for commercial purposes

By definition (1) this land can be considered as a home garden

- c) A two acre land has dwelling house. Although the extent covered by a house is comparatively small and few crops are grown mainly for home consumption.

According to definition (2) this land is also a home garden.

- d) A small house in a two roods land. But the usable land has been intensively cultivated with vegetable crops which are mainly for sale.

Although this land has a dwelling house and also extent is small, as the produce from the land is not mainly for home consumption, it will not be treated as a home garden.

However, in this survey cases like (d) have been treated as a home garden by excluding the area under commercial cultivation. For an example a one acre land with cinnamon cultivation (commercial purpose) also having a dwelling house, a small area around the house, may be 20 perches or less was separated out from the total land and considered as a home garden. Rest of the land was not counted to the home garden area and it was treated as land area under commercial cultivation.

¹ Department of Census and Statistics, Sri Lanka.

Conversion Factors

All figures in the data tables are given in hectares. However, only total figures of all tables were converted into acres and given in a separate row at the end of each table. Due to inadequate space of the tables it is not possible to accommodate all figures in both units. The following conversion factors can be used to convert hectares into acres or perches.

Unit	Metric	Conversion factor	Equivalent Imperial Unit
	Hectare	Multiply by 2.47	Acre
	Hectare	Multiply by 395	Perches

Note: *The home garden total extents given in the last two rows of the tables are presented as rounded figures without decimals. In some cases, when you are totaling the extent figures of the tables, total and grand total figures may slightly vary due to the adding of decimals.*

1. Distribution of home gardens in Gampaha District

There are thirteen Divisional Secretary Divisions (DSDs) in Gampaha District. Generally home gardens in the District show high composition diversity compared to dry zone home gardens. The distribution pattern of the home gardens in Gampaha district are shown in the Figure 1. The total number of home gardens in the district is about 556,611 and total extent of all home gardens is about 44,327 ha. (about 109,488 acres). However, total extents of home gardens in some of the DSDs may be less than the extent shown in the National Land Use Survey (NLUS) conducted in 2019. This is mainly due to the exclusion of some according to the presently used definition for the home garden.

2. Present status of home gardens in Gampaha District

Among the total number of home gardens in the district, about 43% of home gardens are underutilized due to various reasons such as labour shortage, lack of water, animal threats, lack of capital, lack of know-how, absentee landlord etc. (Fig. 2).

There are different water sources available in the home gardens. Majority of the home gardens are having wells and pipe borne water as their water source. However, 50,474 home gardens do not have any water source within the land and obtain from outside sources and also depend on rainfall (Table 1 and Fig. 3).

There are about 47 % of the home gardens (about 225,390 home gardens) in the district are having enough space for the cultivation of tree crops (Fig 4). Rest have no space may be due to either parcel is small in size or existing tree density.

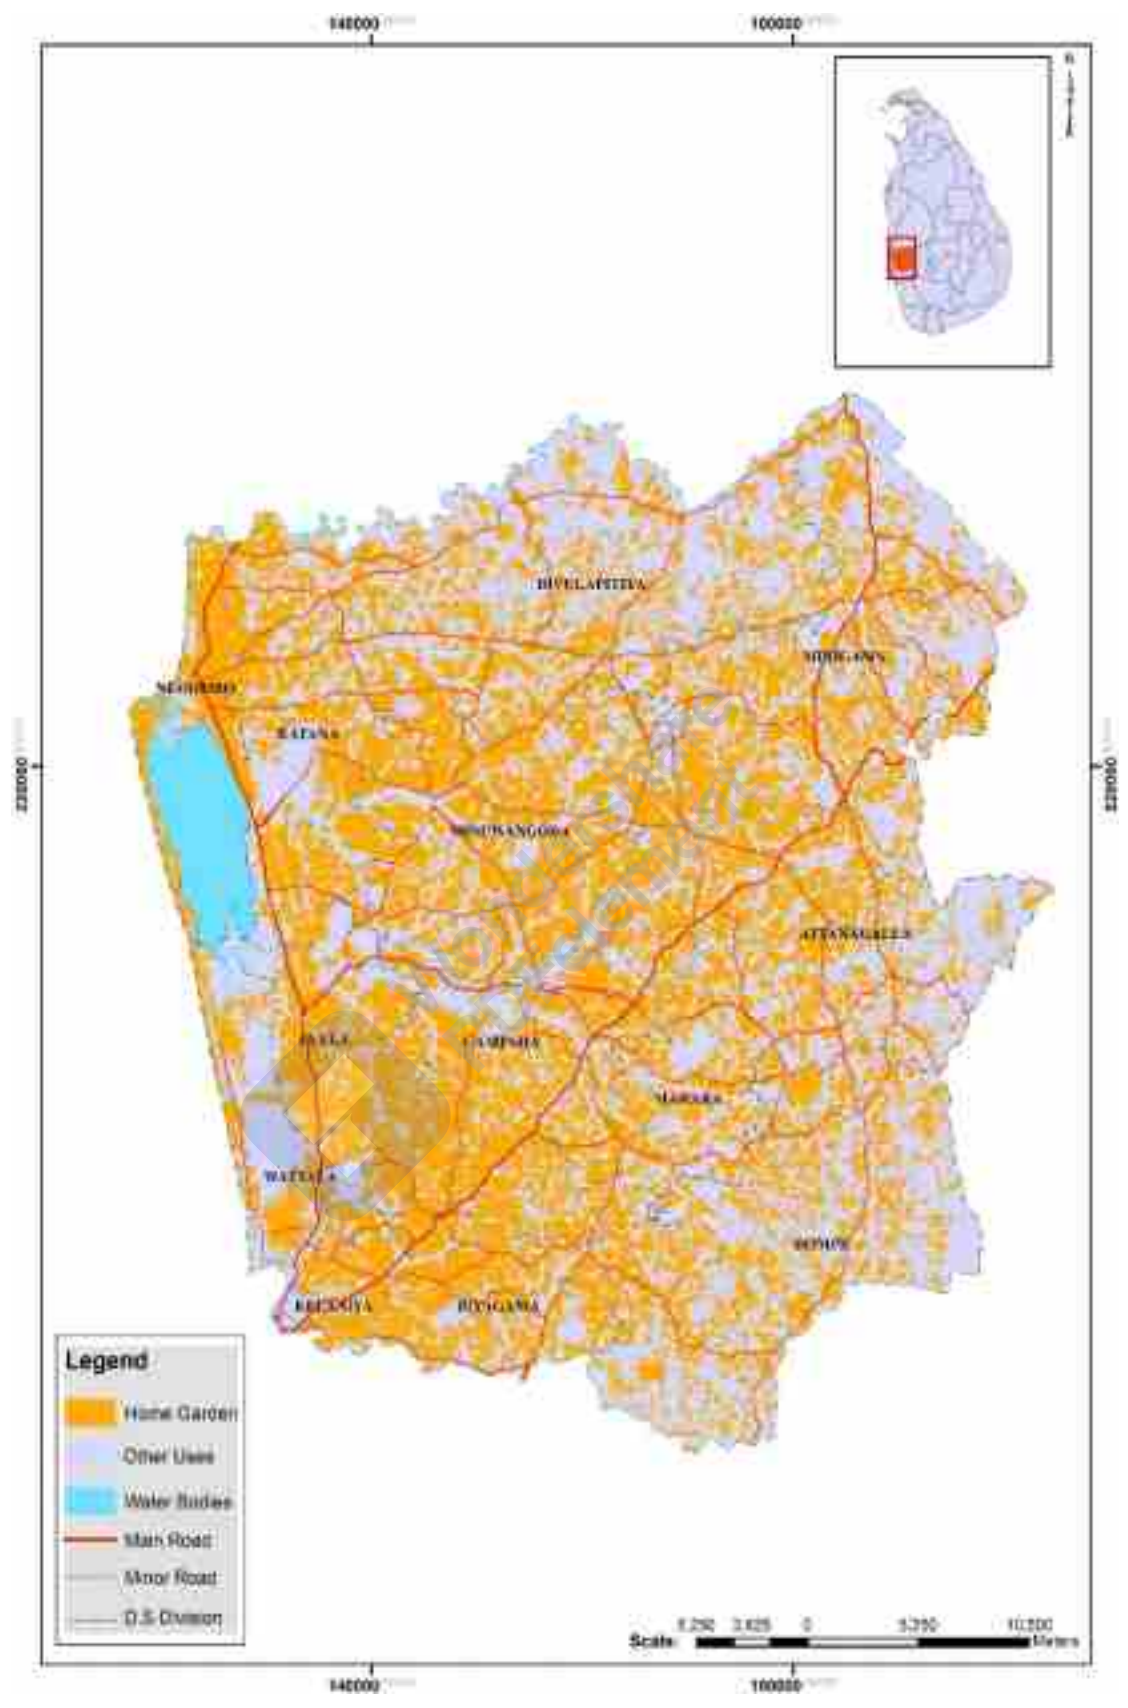

Fig 1. Distribution of home gardens in Gampaha District

Fig. 2. Number of home gardens as a percentage of the total that is underutilized in Gampaha District.

Table 1. Availability of water sources in the home gardens in Gampaha District
