

Data and information of Home Gardens in Hambantota District

**Land Use Policy Planning Department
Ministry of Lands and Land Development
2020**

Definition for Home Garden¹

1. A piece of land which has a dwelling house and some form of cultivation can be considered as a home garden if the total area of the piece of land is **twenty or less than twenty** perches.
2. A piece of land which has a dwelling house and some form of cultivation, if total land areas is **more than twenty** perches can also be considered as a home garden if following two conditions are satisfied.
 - a. It is mainly meant for residential purposes.
 - b. A produce of cultivated land in the home garden is largely for home consumption.

Examples for Home Garden

- a) A land of extent 20 perches or less has a dwelling house and a few bearing coconut trees.
- b) A land of 20 perches or less, has a dwelling house and having extensive cultivation mainly for commercial purposes

By definition (1) this land can be considered as a home garden

- c) A two acre land has dwelling house. Although the extent covered by a house is comparatively small and few crops are grown mainly for home consumption.

According to definition (2) this land is also a home garden.

- d) A small house in a two roods land. But the usable land has been intensively cultivated with vegetable crops which are mainly for sale.

Although this land has a dwelling house and also extent is small, as the produce from the land is not mainly for home consumption, it will not be treated as a home garden.

However, in this survey cases like (d) have been treated as a home garden by excluding the area under commercial cultivation. For an example a one acre land with cinnamon cultivation (commercial purpose) also having a dwelling house, a small area around the house, may be 20 perches or less was separated out from the total land and considered as a home garden. Rest of the land was not counted to the home garden area and it was treated as land area under commercial cultivation.

¹ Department of Census and Statistics, Sri Lanka.

Conversion Factors

All figures in the data tables are given in hectares. However, only total figures of all tables were converted into acres and given in a separate row at the end of each table. Due to inadequate space of the tables it is not possible to accommodate all figures in both units. The following conversion factors can be used to convert hectares into acres or perches.

| Unit | Metric | Conversion factor | Equivalent Imperial Unit |
|------|---------|-------------------|--------------------------|
| | Hectare | Multiply by 2.47 | Acre |
| | Hectare | Multiply by 395 | Perches |

Note: *The home garden total extents given in the last two rows of the tables are presented as rounded figures without decimals. In some cases, when you are totaling the extent figures of the tables, total and grand total figures may slightly vary due to the adding of decimals.*

1. Distribution of home gardens in Hambantota District

Hambantota district is situated in the South Eastern part of Sri Lanka. This district consisted with 12 Divisional Secretary Divisions (DSDs) and 576 Grama Niladhari Divisions (GNDs). This District is mainly in the dry Zone and part of the district is in semi-arid zone. Rainfall mostly confined to monsoonal periods. Average temperature is ranging from 26 °C to 28°C. The elevation varies from sea level to 6 meters.

The distribution pattern of the home gardens in the Hambantota district is shown in Figure 1. The total number of home gardens in the district is about 153,174 and the total extent of all home gardens is about 36,578 ha. (90,347 acres). The total extents of home gardens in the DSDs are lower than the extent shown in the National Land Use Survey (NLUS) conducted in 2019. This is due to exclusion of some areas adjoining to home garden under commercial cultivation such as tea, coconut according to the definition of the home garden considered.

2. Present status of home gardens in Hambantota District

Among the total number of home gardens in the district, about 67% of home gardens are underutilized due to various reasons such as lack of water, lack of capital, wild animal threats, adverse physical conditions of the land, labour shortage, etc. (Fig. 2).

There are different water sources available in the home gardens. They are mainly having wells and pipe borne water as their water source. (Table 1 and Fig. 3).

3. Number of home gardens and their extents available in Hambantota District

The total number of home gardens in the Hambantota district is about 153,174. The size of the home gardens is varying and the majority are between 0.05-0.40 ha (21-160 perches). There are about 20,997 home gardens which are larger than 0.40 ha. (160 perches or 1ac). Data revealed that most of the home gardens in Tangalle DSD are fairly large. There are about 56% of the home gardens (about 84,950 home gardens) in the district are having enough space for cultivation of tree crops (Fig 4). Land space of the rest of the home gardens is limited may be due to either parcel is small in size or existing tree density (Fig. 5).
