

# Data and information of Home Gardens in Polonnaruwa District

**Land Use Policy Planning Department  
Ministry of Lands and Land Development  
2020**

### **Definition for Home Garden<sup>1</sup>**

1. A piece of land which has a dwelling house and some form of cultivation can be considered as a home garden if the total area of the piece of land is **twenty or less than twenty** perches.
2. A piece of land which has a dwelling house and some form of cultivation, if total land areas is **more than twenty** perches can also be considered as a home garden if following two conditions are satisfied.
  - a. It is mainly meant for residential purposes.
  - b. A produce of cultivated land in the home garden is largely for home consumption.

### **Examples for Home Garden**

- a) A land of extent 20 perches or less has a dwelling house and a few bearing coconut trees.
- b) A land of 20 perches or less, has a dwelling house and having extensive cultivation mainly for commercial purposes

*By definition (1) this land can be considered as a home garden*

- c) A two acre land has dwelling house. Although the extent covered by a house is comparatively small and few crops are grown mainly for home consumption.

*According to definition (2) this land is also a home garden.*

- d) A small house in a two roods land. But the usable land has been intensively cultivated with vegetable crops which are mainly for sale.

*Although this land has a dwelling house and also extent is small, as the produce from the land is not mainly for home consumption, it will not be treated as a home garden.*

***However, in this survey cases like (d) have been treated as a home garden by excluding the area under commercial cultivation. For an example a one acre land with cinnamon cultivation (commercial purpose) also having a dwelling house, a small area around the house, may be 20 perches or less was separated out from the total land and considered as a home garden. Rest of the land was not counted to the home garden area and it was treated as land area under commercial cultivation.***

---

<sup>1</sup> Department of Census and Statistics, Sri Lanka.

### **Conversion Factors**

*All figures in the data tables are given in hectares. However, only total figures of all tables were converted into acres and given in a separate row at the end of each table. Due to inadequate space of the tables it is not possible to accommodate all figures in both units. The following conversion factors can be used to convert hectares into acres or perches.*

Unit	Metric	Conversion factor	Equivalent Imperial Unit
	Hectare	Multiply by 2.47	Acre
	Hectare	Multiply by 395	Perches

**Note:** *The home garden total extents given in the last two rows of the tables are presented as rounded figures without decimals. In some cases, when you are totaling the extent figures of the tables, total and grand total figures may slightly vary due to the adding of decimals.*

## **1. Distribution of home gardens in Polonnaruwa District**

There are Seven Divisional Secretary Divisions (DSD) in Polonnaruwa District. Usually, all home gardens in the Polonnaruwa District are fairly uniform in terms of composition and structure. This is mainly due to existing agro-climatic condition in the district. In general, majority of dry zone home gardens do not have multi story nature, compared to the wet zone home gardens. However, most of the home gardens in colonies established under major irrigation schemes are uniform in size and having mixture of tree crops and other perennials. In traditional tank village settlements, the composition is little diverse partly due to elevated ground water table.

The distribution pattern of the home gardens in Polonnaruwa district are shown in the Figure 1. The total number of home gardens in the district is about 123,037 and total extent of all home gardens is about 36,383 ha. (89,867 acres). However, total extents of home gardens in some of the DSDs may be less than the extent shown in the National Land Use Survey (NLUS) conducted in 2019. This is due to the exclusion of some areas according to the presently used definition for the home garden. The differences are given in the separate column in the Table 2, as “Encroached area adjoining to Home Gardens” which was considered as a part of the home garden in previously conducted NLUS. In addition, some of the areas with imperfectly drained soils around the home gardens are used for paddy cultivation during *Maha* season and these areas also excluded in the calculation.

## **2. Present status of home gardens in Polonnaruwa District**

Among the total number of home gardens in the district, about 53% of home gardens are underutilized due to various reasons such as lack of water, animal threats, lack of capital, lack of know-how, adverse physical conditions of the land including soil moisture stress etc. (Fig. 2).

According to this survey, majority of home gardens (45,061) are having the problem of water shortage due to low rainfall in “*Yala Season*”. However, 38,122 home gardens have pipe borne water and about 17,723 home gardens depend on the well

water. Data revealed that 22,055 home gardens have both the well and pipe borne water (Table 1 and Fig. 3).

There are about 71,425 of the home gardens (about 58%) in the district are having enough space for the cultivation of tree crops (Fig 4). Rest have no space may be due to either parcel is small in size or existing tree density.

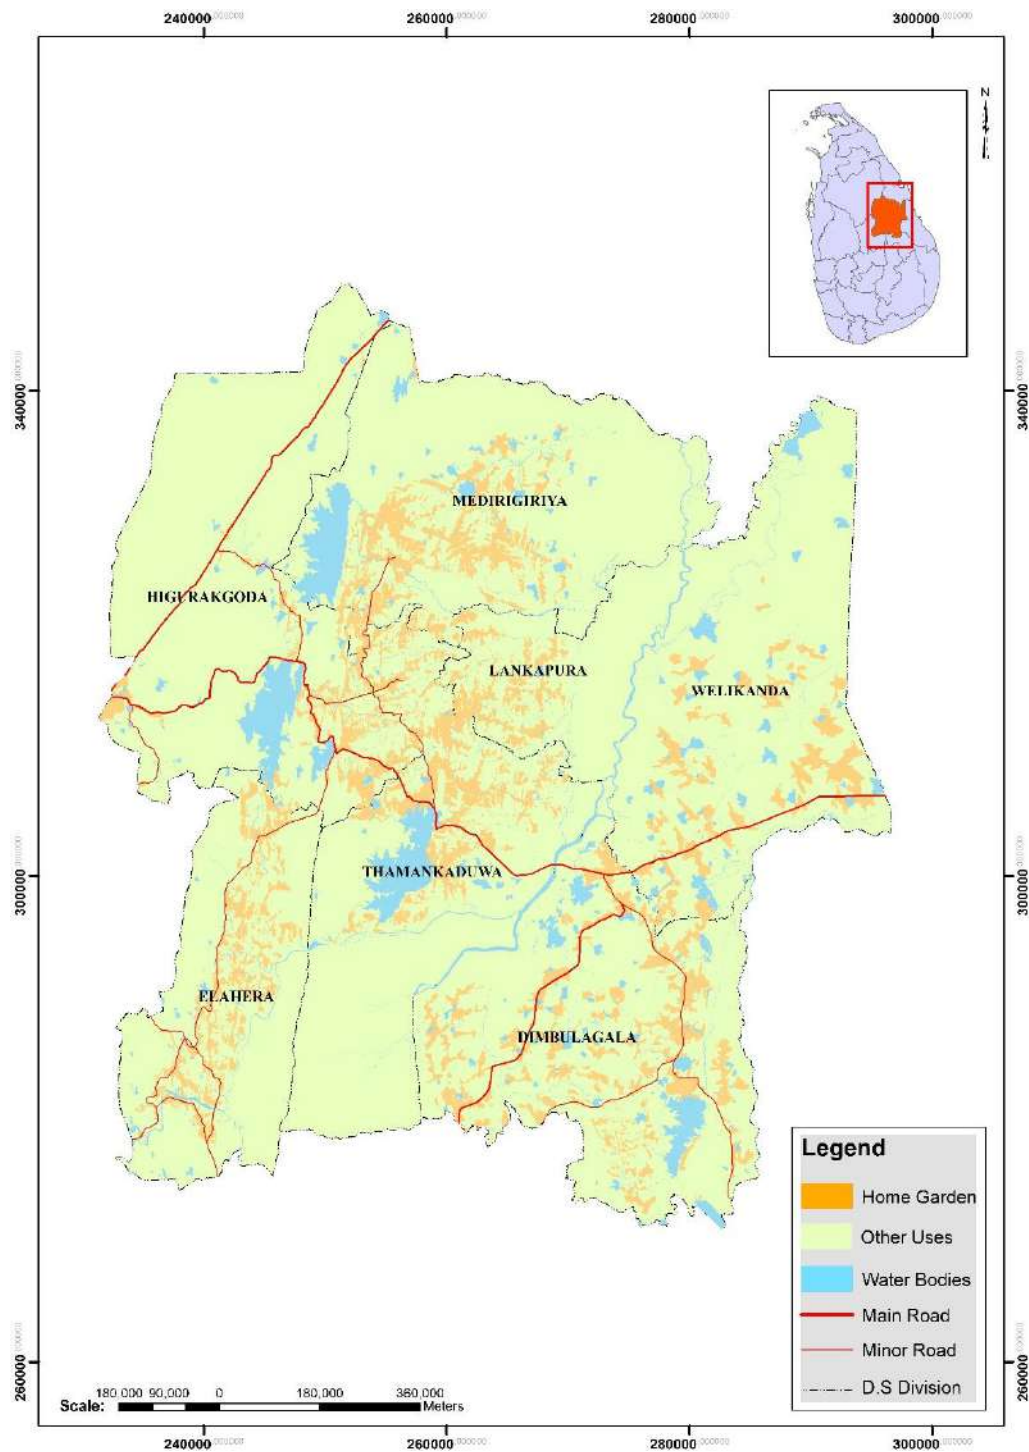

Fig 1. Distribution of home gardens in Polonnaruwa District

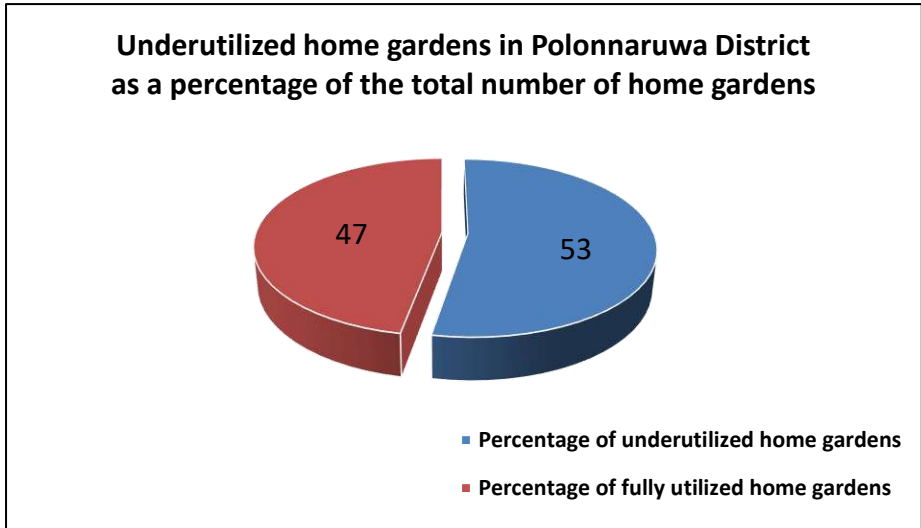

Fig. 2. Number of home gardens as a percentage of the total which is underutilized in Polonnaruwa District.

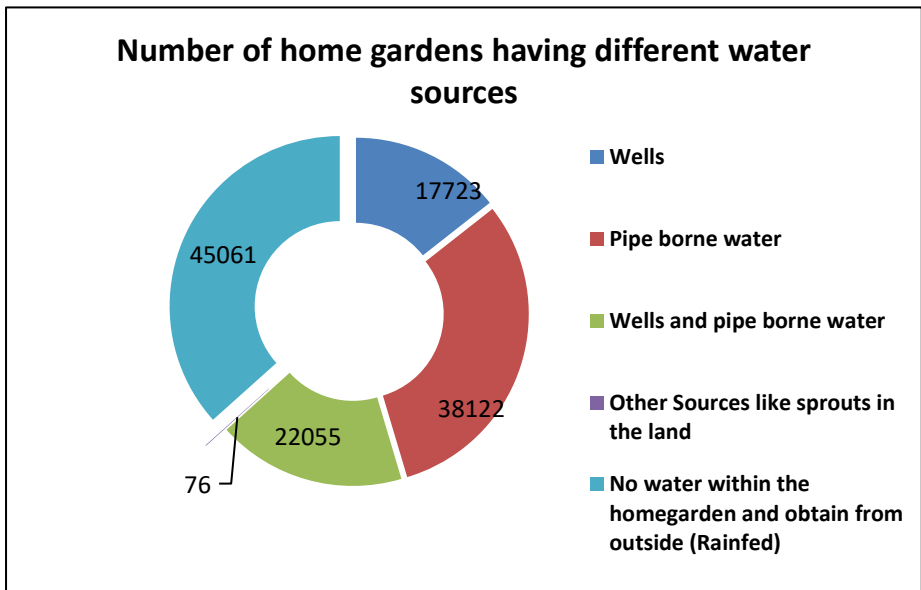

Fig. 3 Number of home gardens and their percentages based on their water sources.
